

# VPN Installation and Configuration Guide for Windows OS

## 1. Download VPN Client

1.1 Visit the website : <https://sslvpn.rsu.ac.th/> Enter your username and password (the same used for RSU-NET Wi-Fi) and click **LOG IN**.

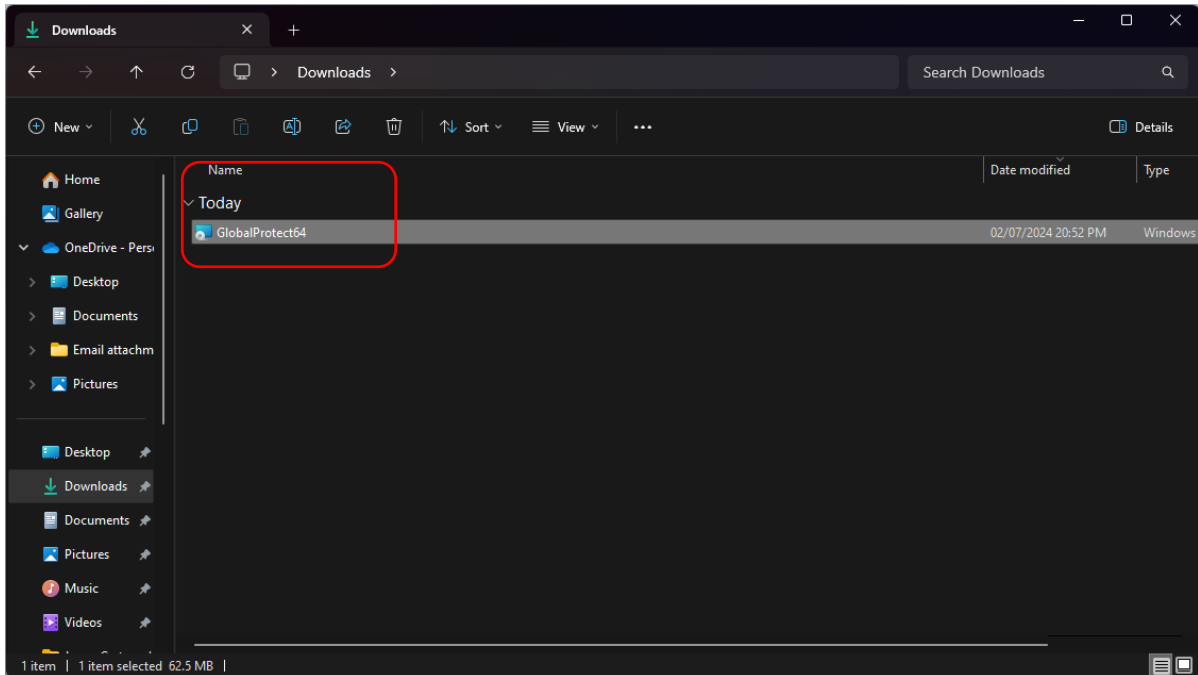

1.2 Download the appropriate VPN Client based on your operating system (Windows 64-bit or Windows 32-bit).

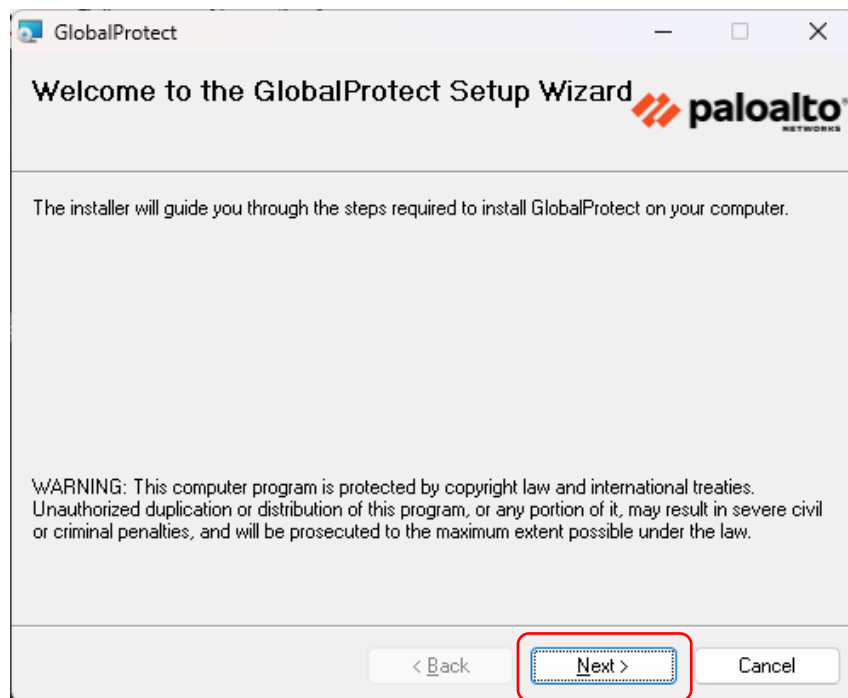

## 2. Install VPN Client

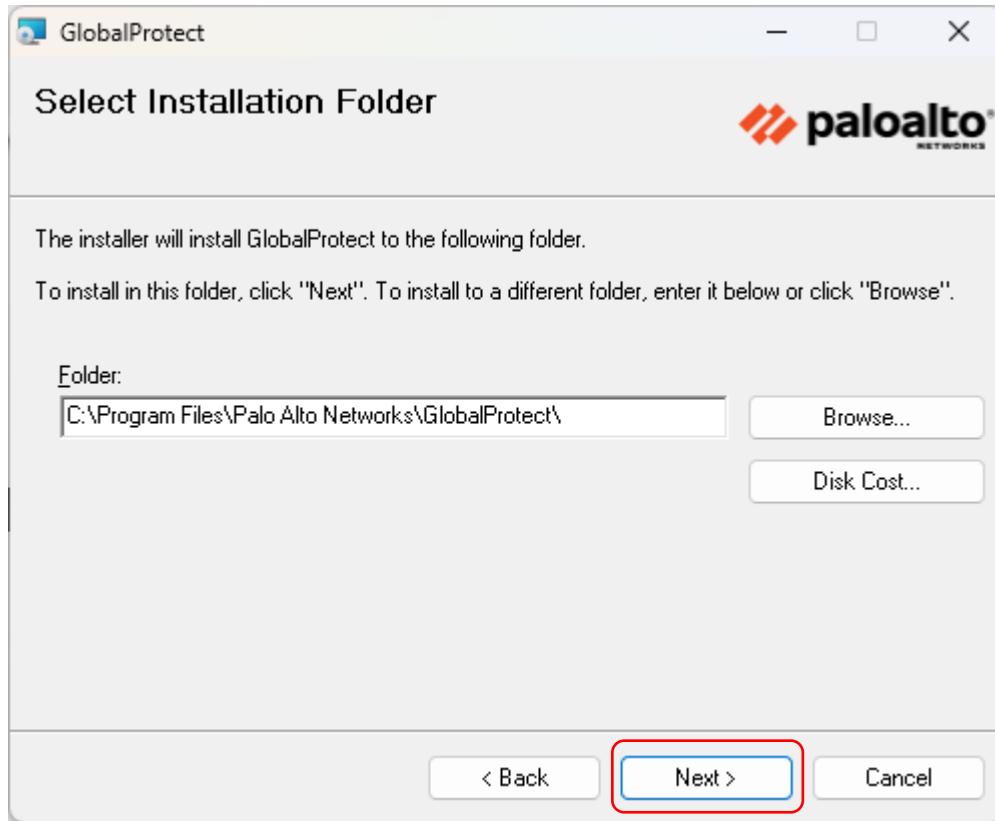

### 2.1 Double-click the downloaded file named **GlobalProtect**.

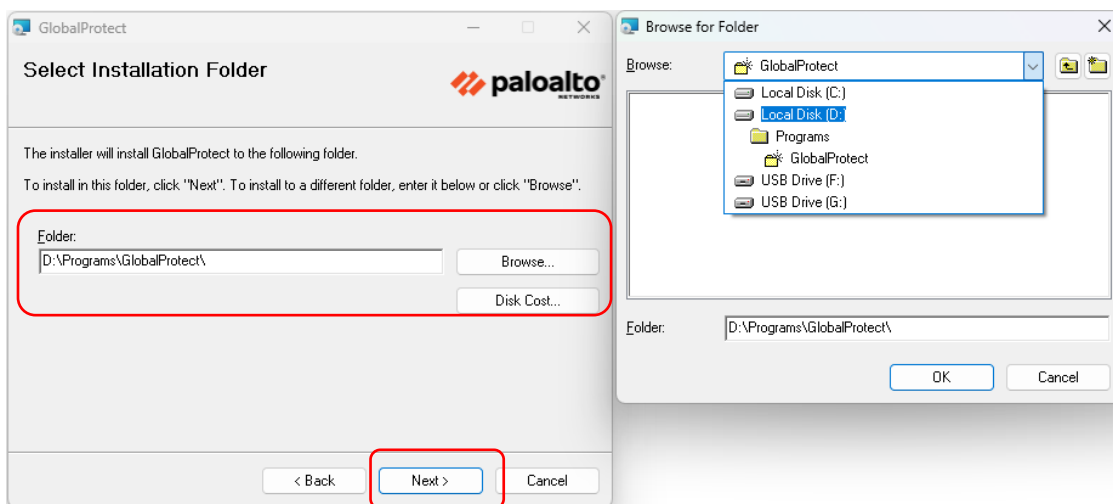

### 2.2 The **Welcome to the GlobalProtect Setup Wizard** screen will appear. Click the **Next** button.

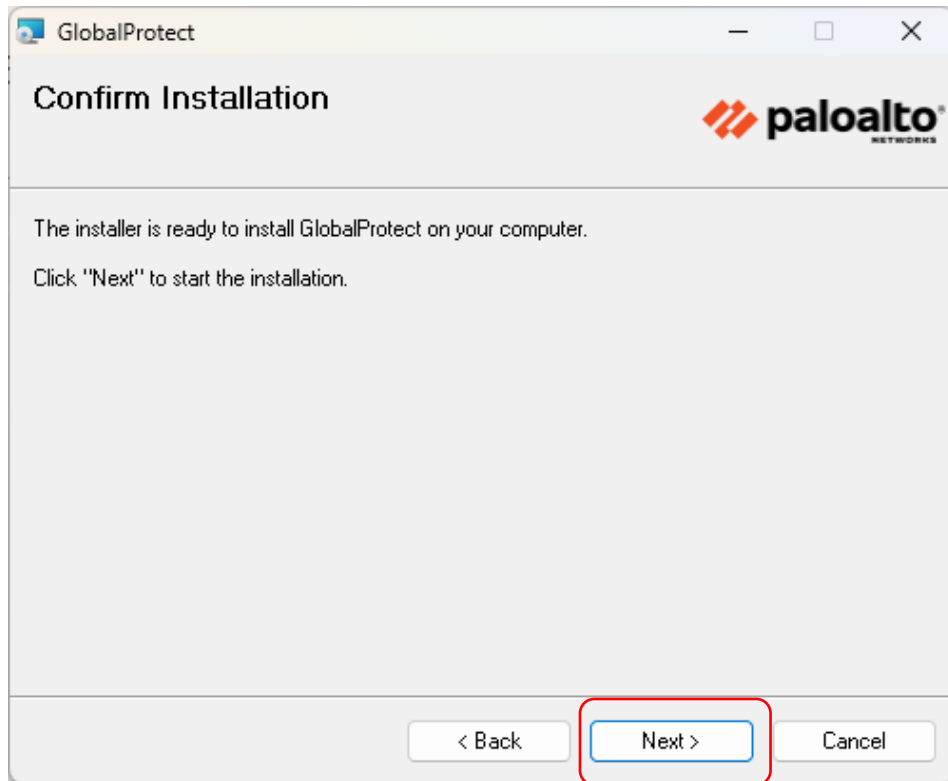

2.3 The **Select Installation Folder** screen will appear. If you do not wish to change the installation folder, click **Next** and proceed to step 2.5.

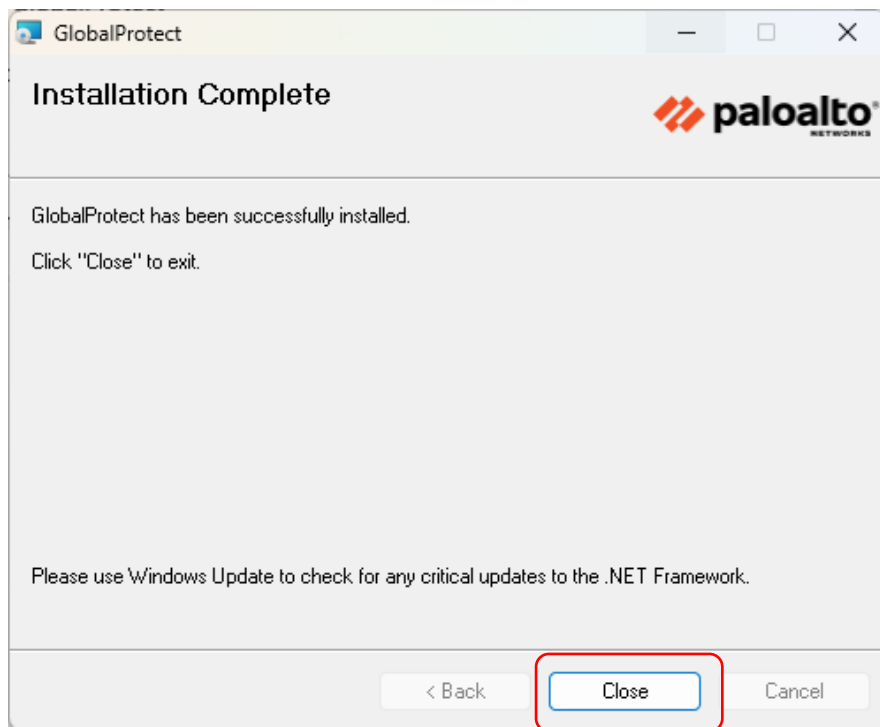

2.4 If you want to change the installation folder, click **Browse**, select the desired folder, click **OK**, and then click **Next**.

2.5 The **Confirm Installation** screen will appear. Click **Next**. If a pop-up appears to confirm the installation, click **Yes**.

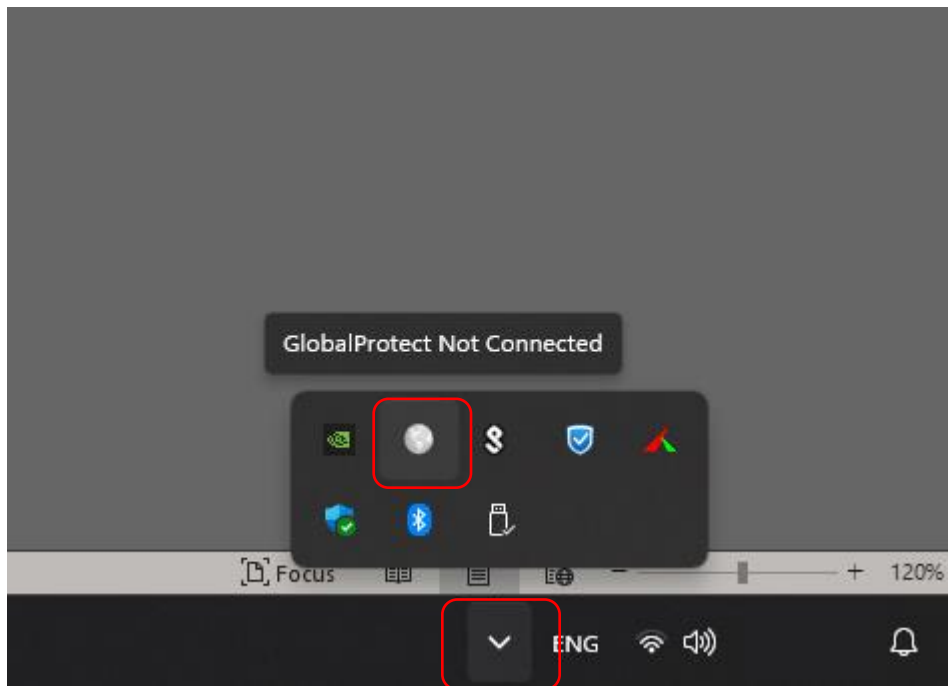

2.6 Once the installation is complete, the **Installation Complete** screen will appear. Click **Close**.

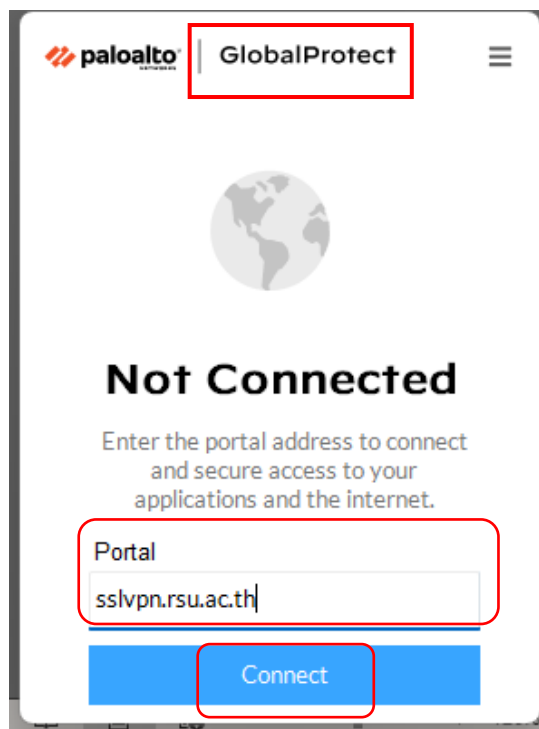

### 3. Setting VPN Client

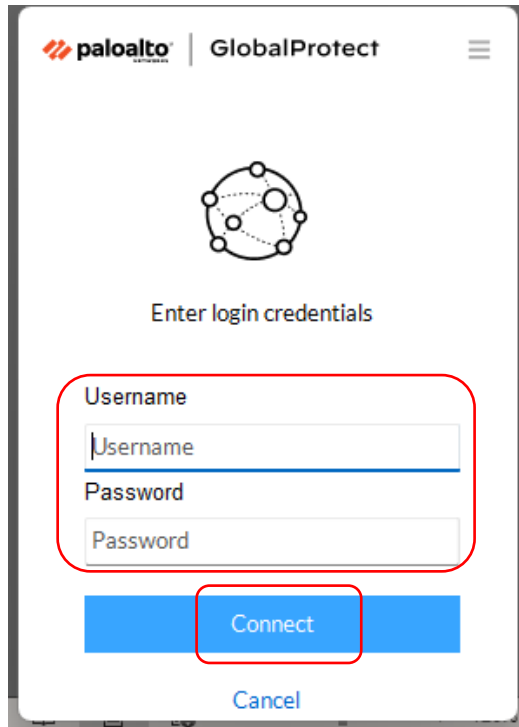

3.1 Click the hidden icon arrow on the taskbar at the bottom right of the screen and click the **GlobalProtect** icon.

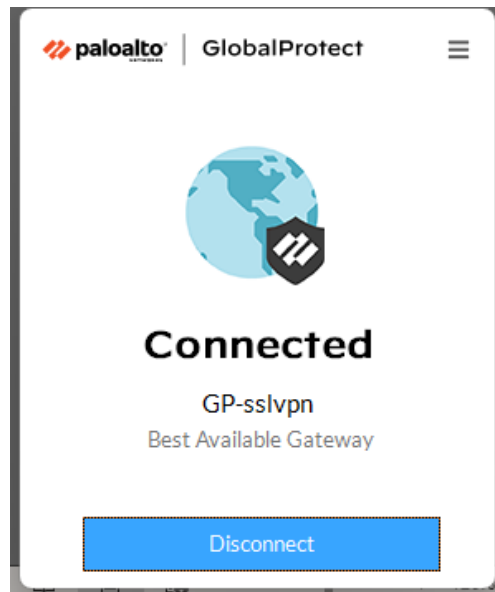

3.2 The **GlobalProtect** window will appear. Enter **sslvpn.rsu.ac.th** in the **Portal** field and click **Connect**.

3.3 Enter your username and password (the same used for RSU-NET Wi-Fi) and click **Connect**.

3.4 If the connection is successful, a connection screen will appear as shown in the picture below. To disconnect, click **Disconnect**.

3.5 The next time you connect, the program will automatically remember your username and password.
